**Annual Update in
Peritoneal Surface Malignancies
'Breaking the Myth'**

13th-15th April, 2023

INDEPSO and ISPSM are returning to physical meetings after a 3-year hiatus. Peritoneal surface oncology in the past 5 years has rapidly gained popularity in India, emerging as a distinct specialty of surgical oncology. And this meeting is designed to cater to the needs of both beginners and experienced surgeons. The speakers include well-renowned international experts as well as some of the most experienced surgeons from India. The program covers the basics of management of peritoneal malignancies as well as the most recent developments in the field

This is the first meeting in the Eastern part of the country where we still need to 'break the myth' regarding the management and prognosis of peritoneal surface malignancies. And there could not be a better organizing team than the one from Tata Memorial that started their program over a decade ago as a beacon of hope for patients with peritoneal metastases in this region.
